About US

Hummingbird Software Technologies, **NetSYS** and **SmartCity Systems** are group of companies. Hummingbird Software Technologies being an established enterprise in sub continent India with **NetSYS**, **SmartCity Systems** as progressively growing companies established in Dubai provides Total Information Technology solutions for diverse business environments in both India and UAE.

Since inception, we have been committed to a total client satisfaction through quality service, coupled with on-time support. We strongly believe in our corporate philosophy - "we amaze customers", which helps us to offer solutions that maximizes value for our customers.

Today IT readiness with access to quality software solutions is what helps companies take the leap ahead. We, apply technology with innovation and responsibility to meet the challenges of today's dynamic digital environment. Understanding of diverse business domains combined with expertise in latest technology and tools, enables us to deliver quality solutions for any large to medium businesses.

What's more, the information management systems developed by us, coupled with our timely post-sales support has made us one of the fastest growing Network/Software companies in Middle East.

One Group, Many solutions

We focus on four key areas:

- Infrastructure and IT Network Support (Security, VPN, Firewall, Server, IP Telephony & Cabling), CCTV, IP Camera, DVR solution, WLAN, Equipments in security & surveillance, Time attendance, Bio matrix solutions.
- Designing, Implementing and Supporting Web Based Applications like HRWEB / Recruitment Manager / Content Management Systems / Accounting / Document management systems / Inventory / CRM and Project Management System)
- IT Consultancy specializing in System Integration Issues.
- Hosting Solutions – email Services and web

Smart HR & Payroll System

Smart HR & Payroll System has been designed and developed by Smart City Systems (www.smartcitysystems.com) to meet the specific requirements and objectives of managing work force records. Payroll processing in an efficient and effective way and in compliance with the laws of the United Arab Emirates and Middle East Countries.

Overview

The Smart Payroll Software is a modular system and meets the payroll needs of organizations with single or multiple companies, departments and cost centers. Ideal for the SME and Large Enterprise segments, it yet can be scaled and customized to meet the specific needs of large corporations. Payroll is always a concern to Senior Management. The Smart Payroll Software offers comprehensive security checks and controls built to protect against unauthorized access to sensitive information held in the payroll system. Access can be controlled and monitored at various levels. Smart HR & Payroll is designed to provide easy and cost-effective links with other platforms simplifying integration within enterprise systems. The Smart HR & Payroll Software offers users a simple and easily understandable menu structure and a customizable report generation facility. The software is flexible and supports access to reliable information needed for management decision-making.

Smart HR & Payroll through its comprehensiveness improves the Management Information System. Concepts such as Total Cost of Employees, Payroll Reconciliations and Personal data on employees can be accessed, monitored and reviewed and decisions promptly taken. All key areas of payroll management have been addressed including fixed and variable payroll earnings and deductions, loan processing, leave, absence, gratuity, cost allocation, and organizational management. The data entry/maintenance forms have been designed by Finance and Payroll professionals and process flows evaluated to deliver efficiency in the payroll process. Controls have been developed right through the process and Managers, Auditors and Payroll executives have contributed significantly to develop one of the most robust and secure systems in the Middle East.

Salient features of the system

- **Multi Company, Multi Country Support / Multi User**
- **Payroll System Modules**

- **Integration (Option):** With Financial Management System, ERP, Time & Attendance, Access Control Systems, etc.

Smart Appraisal

Smart Appraisal Automates the time-consuming Employee Performance Appraisal administration process, thereby dramatically improving HR and Line Manager productivity.

Accommodates any kind and combination of Performance Measures such as Goals, Objectives, Key Performance Indicators (KPIs), Competencies, and Values.

Forms and templates can be tailored to specific roles in the organization. Smart HR Software allows HR to build the online reviews just like the existing, paper-based review. The forms, reviews, and templates can be updated and re-created as the evaluation process evolves.

Comment boxes, rating scales, drop down lists, pick lists, calendars, check-boxes, forms, and instructions can all be modified to meet the organization's needs

Fully scalable—handles from only 20 to thousands of employees, covering all staff and managerial levels, at multiple worldwide locations.

Smart Self Service Module

Paper-based time off requests, beneficiary updates, and pay stubs are becoming a thing of the past. Technology has made HR a self-service function in the small and mid-size business sector

The HR software keeps track of the company's benefits and compensation data, allowing employees to view the status of their accrued leave, make time-off requests, or make necessary changes to their contact or benefits information -- all without phone calls or emails to HR personnel. And allowing employees to key in the information themselves online helps boost productivity, too. There are no more forms to fill out in triplicate.

Key benefits

- **Improved employee satisfaction:** Keep employees informed and engaged with automated communications – directly to their computers, handhelds and mobile phones.
- **Improved HR data:** Ensure your central HR systems have the latest employee information without costly paper based data gathering exercises.
- **Secure:** Opted in and secure communications.
- **Lower Cost:** More cost effective than HR staff calling individuals.
- **Measurable:** No estimates or guess work – you will know precisely if your employee saw your communication and when and how they responded to it.
- **Targeted:** Smart self Service Module has a tightly controlled targeting which means the right person receives the right notification and that only authorized people have the rights to send to wide audiences.

Smart Recruitment Manager

Smart Recruitment Manager is a highly configurable, scalable & user friendly web-based Applicant Tracking System/ Recruitment Management System. It is user friendly, flexible to fix around your hiring process and continuous product advancements are made to the system.

Smart Recruitment Manager covers the complete process of creating a job vacancy, designing customized application forms for different vacancy, the candidate applying for a job, the recruitment manager evaluating the candidates, scheduling interviews, ranking the candidates depending on various interviews conducted, short listing candidates and recruiting the candidate. Multiple Users

would be able to login to smart recruitment manager. The access to each functionality is controlled by different permissions so that an administrator of the system can create users with different access rights. The system tracks the complete process the applicant goes through before getting hired. Various documents and questionnaire related to vacancy or job postings can be maintained for current usage and future references. Advanced Search and various Customized reports are provided as per the customers requirements. Smart recruitment manager can be integrated into you existing system and also customized to match your hiring process.

Features of Smart Recruitment Manager

Job Posting - Create Customized Application Forms using XML based form builder

Dashboard - Complete overview of live job vacancies, number of applications received, Number of candidates shortlisted, Number of interviews conducted /scheduled etc

- Multiuser and Permission based access
- Selected candidates login
- Consultant/Recruitment agents login facility

Time & Attendance

What is actually time and attendance management?

It is actually a system of monitoring of employee work hours for the entire company and the analysis of various human resource figures such as overtime allowance, meal allowance, transport allowance and even bonus that are often derived from employee working hours.

What are the various benefits of such a system?

It will be more clear to employers as a whole and yourself as a senior level management than to your employees. For the management level personnel, such a system allows them to monitor employee performance automatically – and thus allowing them to evaluate if there are any loopholes within the system. It also keep track of employees within the organization by forcing them to be accountable for their absences – once again, better for the business than for the employee himself. That is why most bosses are eagerly engaging in implementing time and attendance management system into their standard operating procedures.

Today's automated systems offer another benefit – the ability to calculate valuable data about employee performance both on an individual level (how hard does a particular employee work and how much should he be rewarded?) and on an organizational level (what days bring in most absences? Are people staying back to finish up on projects or leaving as quickly as possible?). Access to this information allows the 'upper management' to make informed decisions to improve employee performance and productivity on a major scale.

We support the following products and T&A Integration

BioStation

- Full-featured Time Attendance & Access Control Terminal

BioLite Net

- IP Based Outdoor Fingerprint Terminal
- Full Access Control & Time Attendance Features

Time & Attendance cont..

BioEntry Plus

- IP Based Access Control System
